

Gorilla Melon

Strong like a gorilla, sweet like a melon.

- **For avid smokers.** Up to 30% strength.
- **Super resistant.** Takes any stress like the champion she is.
- **Dense and sticky buds.** Returns beyond expectations.
- **Sweet and sour.** Melon flavors combined with classic flavors of GG#4.
- **Densely packed.** Bushy and very frosty appearance.

Gorilla Melon grows more outwards than upwards, resulting in a bushy and manageable plant. She produces small, rock-solid and very sticky buds that will envelop her branches by the end of the grow cycle. This variety develops plenty of colas, so don't worry about returns: she'll have you covered with a supply of sweet and sour, top-notch quality flowers. Upon smoking she will show off her melon flavors, inherited from our keeper cut of Melon seed, with the highlights of a classic flavor inherited from GG#4 (Murdock GG Seeds). Another thing she has from her parents is her gorilla-like power that allows her to shrug off any kind of stress. You can do all the defoliation you consider necessary, or take all the clones you want, and watch her recover almost instantly and come back stronger than before.
